- HasOverlay (Overlay Check)
- HasRichSignature (Rich Signature Check)
- keylogger (Run a keylogger)
- win_registry (Affect system registries)
- win_token (Affect system token)
- without_attachments (Rule to detect the no presence of any attachment)
- without_images (Rule to detect the no presence of any image)
- without_urls (Rule to detect the no presence of any url)
- contentis_base64 (This rule finds for base64 strings)
- Str_Win32_Winsock2_Library (Match Winsock 2 API library declaration)
- Str_Win32_Wininet_Library (Match Windows Inet API library declaration)
- Str_Win32_Internet_API (Match Windows Inet API call)
- Str_Win32_Http_API (Match Windows Http API call)
- anti_dbg (Checks if being debugged)
- network_dga (Communication using dga)
- escalate_priv (Escalade priviledges)
- screenshot (Take screenshot)
- win_files_operation (Affect private profile)
- with_urls (Rule to detect the presence of an or several urls)
- maldoc_find_kernel32_base_method_1 ()
- Big_Numbers3 (Looks for big numbers 64:sized)
- RIPEMD160_Constants (Look for RIPEMD-160 constants)
- SHA1_Constants (Look for SHA1 constants)

- SHA512_Constants (Look for SHA384/SHA512 constants)
- BASE64_table (Look for Base64 table)

Threads tree

The following tree represents sample's threads. T<index> is an alias for sample's threads (numeration is done in the order of threads creation). P<index> is an alias for processes owning sample's threads.

Running processes

Here it is the list of running processes after sample execution.

Most interesting actions

The following list it's a collection of the most interesting events captured. This list is ordered by the score assigned to the event. In the section "Threads behavioural information" it's possible to find all the actions performed by each sample's thread ordered chronologically.

Most interesting strings

The following list it's a collection of the most interesting strings found in the sample's modules code or data. A complete list of strings for each sample's module can be found in the section "Sample's unpacked / injected modules."

Connections and readable network traffic

The analysis environment captures network traffic happened while sample execution. It classifies the traffic and tries to extract the most significant parts from the communications data.

In this section it's possible to find parts of the communication data that are easier to be read.

Threads behavioural information

In this section it's possible to find information about sample's threads, such as the actions performed by each sample's thread ordered chronologically.

Malware processes' network events

The analysis environment tries to capture and collect network actions performed by sample's threads.

Sample's unpacked / injected modules

In this section it's possible to find information about sample's modules, such as the rich signatures, strings, yara rules matching the module,...

The analysis environment performs an heuristic search trying to find sample's injected or unpacked modules in memory, dumping and analyzing them.

• Module 1 (probably unpacked / injected by the sample)

• Module 1 rich signatures
