Analysis report for sample: 002df71888e54821d50436d9bc576106

This report has been generated by a set of tools for semi-supervised behavioral analysis of executables.

More information about these reports at **http://www.vallejo.cc**.

This work is licensed under a Creative Commons Attribution 4.0 International License. To view a copy of this license visit http://creativecommons.org/licenses/by/4.0/.

Report classification: 3116 (indicates the level of interest of the report, based on the amount of information collected about the sample).

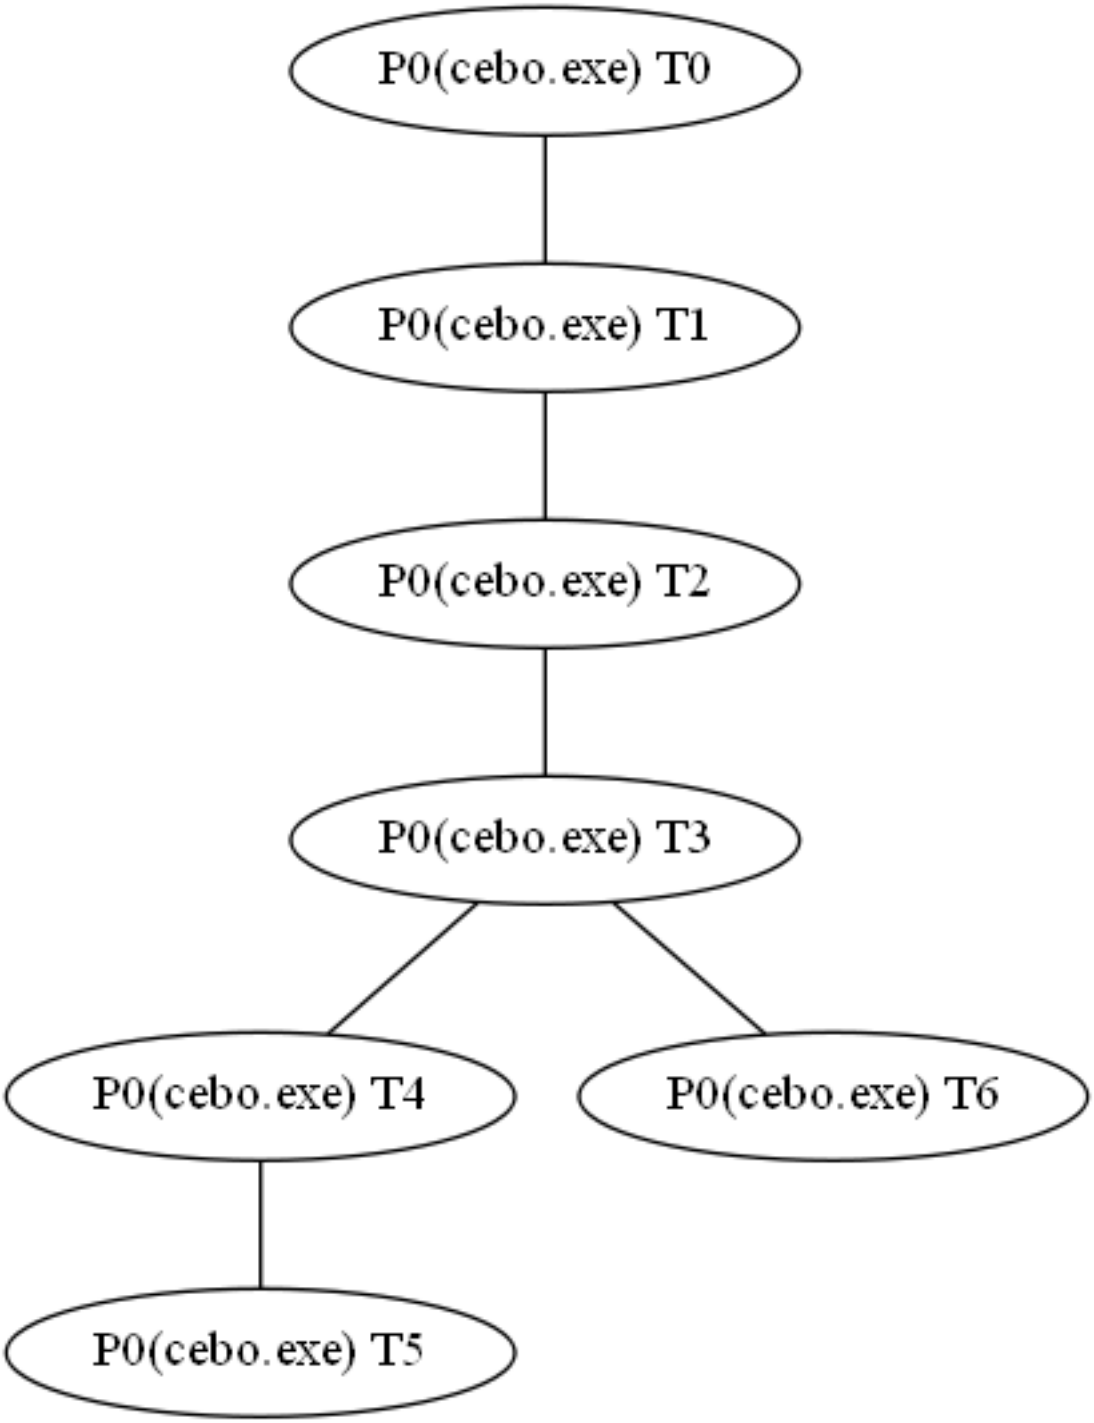
Threads tree

The following tree represents sample's threads. T<index> is an alias for sample's threads (numeration is done in the order of threads creation). P<index> is an alias for processes owning sample's threads.



Running processes

Here it is the list of running processes after sample execution.

Processes with sample' threads

- Name cebo.exe Alias P0

Other processes

- Name System
- Name smss.exe
- Name csrss.exe
- Name wininit.exe
- Name csrss.exe
- Name winlogon.exe

Most interesting actions

The following list it's a collection of the most interesting events captured. This list is ordered by the score assigned to the event. In the section "Threads behavioural information" it's possible to find all the actions performed by each sample's thread ordered chronologically.

- RegSetValue (HKLM\\System\\CurrentControlSet\\services\\Tcpip\\Parameters\\GlobalMaxTcpWindowSize Type: REG_DWORD, Length: 4, Data: 16777215)

Connections and readable network traffic

The analysis environment captures network traffic happened while sample execution. It classifies the traffic and tries to extract the most significant parts from the communications data.

In this section it's possible to find parts of the communication data that are easier to be read.

- **udp 192.168.133.254:67 ---> 192.168.133.217:68**

Malware processes' network events

The analysis environment tries to capture and collect network actions performed by sample's threads.

Process P0 (cebo.exe)'s network events

- TCP Reconnect (javi-PC:dynport-> javi-PC:http (0))
- TCP Reconnect (javi-PC:dynport-> javi-PC:http (0))

Sample's unpacked / injected modules

In this section it's possible to find information about sample's modules, such as the rich signatures, strings, yara rules matching the module,...

The analysis environment performs an heuristic search trying to find sample's injected or unpacked modules in memory, dumping and analyzing them.

• Module 1 (probably unpacked / injected by the sample)

• Module 1 rich signatures

• Module 1 yara matches

• Module 1 strings

• Module 1 most interesting strings

- Runtime Error!
- - floating point support not loaded
- R6002
- runtime error
- TLOSS error
- SING error
- DOMAIN error
- - inconsistent onexit begin-end variables
- R6034
- This indicates a bug in your application. It is most likely the result of calling an MSIL-compiled (/clr) function from a native constructor or from DllMain.
- - Attempt to use MSIL code from this assembly during native code initialization
- R6033
- - not enough space for locale information
- R6032
- This indicates a bug in your application.
- - Attempt to initialize the CRT more than once.
- R6031
- - CRT not initialized
- R6030
- - unable to initialize heap
- R6028
- - not enough space for lowio initialization
- R6027
- - not enough space for stdio initialization
- R6026
- - pure virtual function call
- R6025
- - not enough space for _onexit/atexit table
- R6024
- - unable to open console device
- R6019
- - unexpected heap error
- R6018
