Analysis report for sample: 02afcbb29adaeafa05a2d0cc28030ef1

This report has been generated by a set of tools for semi-supervised behavioral analysis of executables.

More information about these reports at **http://www.vallejo.cc**.

This work is licensed under a Creative Commons Attribution 4.0 International License. To view a copy of this license visit http://creativecommons.org/licenses/by/4.0/.

Report classification: 3853 (indicates the level of interest of the report, based on the amount of information collected about the sample).

Threads tree

The following tree represents sample's threads. T<index> is an alias for sample's threads (numeration is done in the order of threads creation). P<index> is an alias for processes owning sample's threads.

Running processes

Here it is the list of running processes after sample execution.

Processes with sample' threads

- Name cebo.exe Alias P0

Other processes

- Name System
- Name smss.exe
- Name csrss.exe
- Name wininit.exe
- Name csrss.exe
- Name winlogon.exe
- Name services.exe
- Name lsass.exe
- Name lsm.exe
- Name svchost.exe
- Name svchost.exe

Most interesting actions

The following list it's a collection of the most interesting events captured. This list is ordered by the score assigned to the event. In the section "Threads behavioural information" it's possible to find all the actions performed by each sample's thread ordered chronologically.

- RegSetValue (HKCU\\Software\\Microsoft\\Windows\\CurrentVersion\\Run\\NS1FNS2SNF Type: REG_SZ, Length: 90, Data: C:\\Users\\javi\\AppData\\Roaming\\7FiCni0ooo.exe)

Connections and readable network traffic

The analysis environment captures network traffic happened while sample execution. It classifies the traffic and tries to extract the most significant parts from the communications data.

In this section it's possible to find parts of the communication data that are easier to be read.

O que afinal representa meu IP?
 O uso de computadores em rede, tal como a internet, requer que cada máquina possua um identificador que a diferencie das demais. É necessário que cada computador tenha um endereço, alguma forma de ser encontrado. O IP (Internet Protocol) é uma tecnologia que permite a comunicação padronizada entre computadores, mesmo que estes sejam de plataformas diferentes, identificando-os de forma única em uma rede. A comunicação entre computadores é feita através do uso de padrões, ou seja, uma espécie de "idioma" que permite que todas as máquinas se entendam. Em outras palavras, é necessário fazer uso de um protocolo que indique como os computadores devem se comunicar. No caso do IP, o protocolo aplicado é o TCP/IP (Transmission Control Protocol/Internet Protocol). Existem outros, mas o TCP/IP é o mais conhecido, além de ser o protocolo usado na internet. O uso do protocolo <a href="http://www.pop-rs.rnp.br/ovni/tcpip/">TCP/IP</a> não é completo se um endereço IP não for utilizado. Se, por exemplo, dados são enviados de um computador para o meu, o outro computador precisa saber meu IP assim como o meu precisa saber o endereço IP do emissor, caso a comunicação exija uma resposta. Sem o endereço IP, os computadores não conseguem ser localizados em uma rede. <img src="http://www.meuenderecoip.com/img/mais.gif" alt="Mais" width="9" height="9" /> Outras ferramentas[...]teis

que é o endereço IP? O que afinal representa meu IP?
 O uso de computadores em rede, tal como a internet, requer que cada máquina
possua um identificador que a diferencie das demais. É necessário que cada computador tenha um endereço, alguma forma de ser encontrado. O
IP (Internet Protocol) é uma tecnologia que permite a comunicação padronizada entre computadores, mesmo que estes sejam de plataformas diferentes,
identificando-os de forma única em uma rede. A comunicação entre computadores é feita através do uso de padrões, ou seja, uma espécie de
"idioma" que permite que todas as máquinas se entendam. Em outras palavras, é necessário fazer uso de um protocolo que indique como os computadores
devem se comunicar. No caso do IP, o protocolo aplicado é o TCP/IP (Transmission Control Protocol/Internet Protocol). Existem outros,
mas o TCP/IP é o mais conhecido, além de ser o protocolo usado na internet. O uso do protocolo <a
href="http://www.pop-rs.rnp.br/ovni/tcpip/">TCP/IP</a> não é completo se um endereço IP não for utilizado. Se, por exemplo, dados são
enviados de um computador para o meu, o outro computador precisa saber meu IP assim como o meu precisa saber o endereço IP do
emissor, caso a comunicação exija uma resposta. Sem o endereço IP, os computadores não conseguem ser localizados em uma rede. <img

Sample's unpacked / injected modules

In this section it's possible to find information about sample's modules, such as the rich signatures, strings, yara rules matching the module,...

The analysis environment performs an heuristic search trying to find sample's injected or unpacked modules in memory, dumping and analyzing them.

• Module 1 (probably unpacked / injected by the sample)

• Module 1 rich signatures

• Module 1 yara matches

• Module 1 strings

• Module 1 most interesting strings
