Analysis report for sample: 3b7141d09da89942fadd5ff46ca14983

This report has been generated by a set of tools for semi-supervised behavioral analysis of executables.

More information about these reports at **http://www.vallejo.cc**.

This work is licensed under a Creative Commons Attribution 4.0 International License. To view a copy of this license visit http://creativecommons.org/licenses/by/4.0/.

Report classification: 5387 (indicates the level of interest of the report, based on the amount of information collected about the sample).

Index

- Sample
- AV detections

- Sample's unpacked / injected modules

Sample

- md5: 3b7141d09da89942fadd5ff46ca14983

AV detections

- Microsoft: Trojan:Win32/Bulta!rfn
- Kaspersky: HEUR:Trojan.Win32.Generic
- Symantec: Trojan.FakeAV!gen116
- Malwarebytes: Trojan.MalPack.FFS

Original source url

-

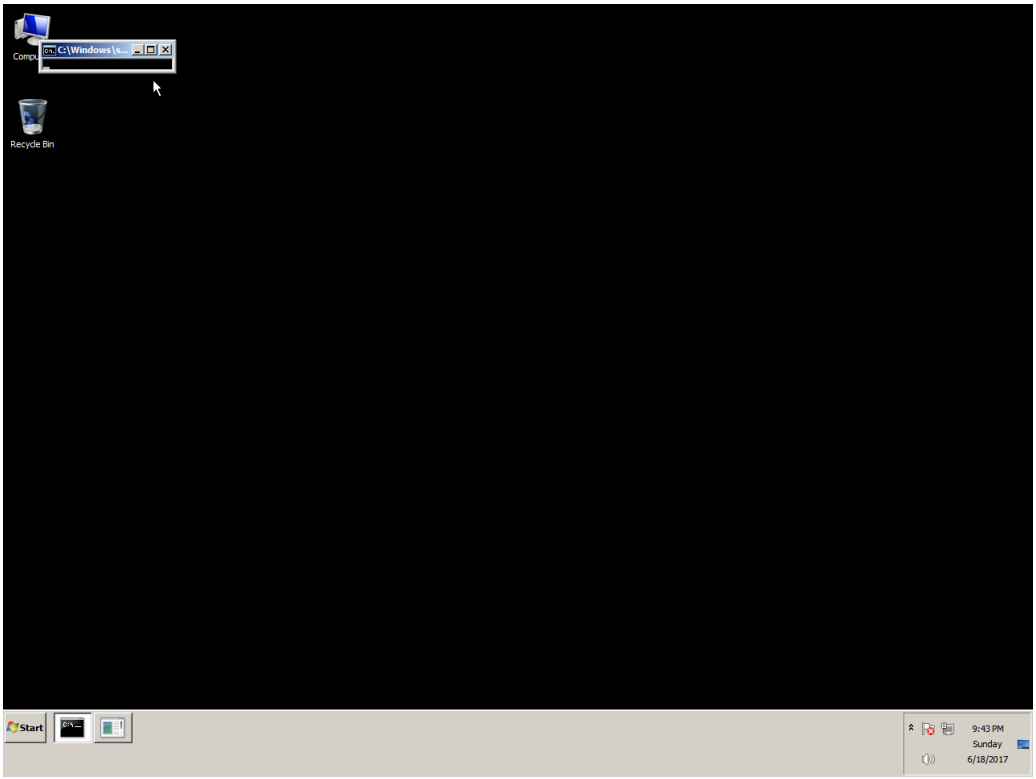
Virustotal url

- https://virustotal.com/es/file/08cda163de89540f87f184b21c5edea1f4338c303b351cba0a41fb2910d18437/analysis

Yara matches

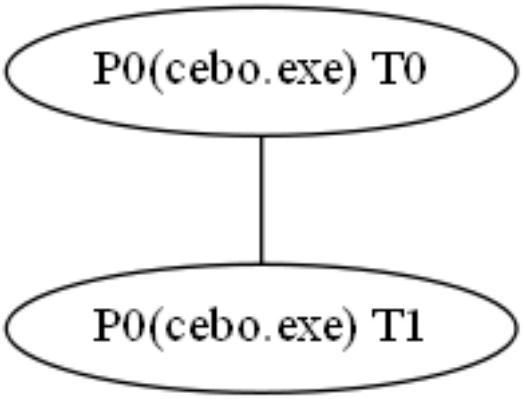
The following yara rules have matched injected or unpacked modules's code or data areas.

Snapshot



Threads tree

The following tree represents sample's threads. T<index> is an alias for sample's threads (numeration is done in the order of threads creation). P<index> is an alias for processes owning sample's threads.



Running processes

Here it is the list of running processes after sample execution.

Processes with sample' threads

- Name cebo.exe Alias P0

Other processes

- Name System
- Name smss.exe
- Name csrss.exe
- Name wininit.exe
- Name csrss.exe
- Name winlogon.exe
- Name services.exe
- Name lsass.exe
- Name lsm.exe
- Name svchost.exe
- Name svchost.exe
- Name svchost.exe
- Name svchost.exe
- Name svchost.exe
- Name audiodg.exe

Most interesting actions

The following list it's a collection of the most interesting events captured. This list is ordered by the score assigned to the event. In the section "Threads behavioural information" it's possible to find all the actions performed by each sample's thread ordered chronologically.

Most interesting strings

The following list it's a collection of the most interesting strings found in the sample's modules code or data. A complete list of strings for each sample's module can be found in the section "Sample's unpacked / injected modules."

- suspicious event or string: sC StOp wscsvc
- suspicious event or string: sC StOp wuauserv

Involved hosts

Dns queries

Connections and readable network traffic

The analysis environment captures network traffic happened while sample execution. It classifies the traffic and tries to extract the most significant parts from the communications data.

In this section it's possible to find parts of the communication data that are easier to be read.

Threads behavioural information

In this section it's possible to find information about sample's threads, such as the actions performed by each sample's thread ordered chronologically.

- **Thread T0 (in process P0, cebo.exe) description**
  - **Thread's childs**
    - Thread T1 (in process P0, cebo.exe)
  - **Thread' events**
    - Thread Create (Thread ID: T1)
- **Thread T1 (in process P0, cebo.exe) description**
  - **Thread's childs**
  - **Thread' events**
    - Thread Create (Thread ID: TUNKALIAS)

Malware processes' network events

The analysis environment tries to capture and collect network actions performed by sample's threads.

Sample's unpacked / injected modules

In this section it's possible to find information about sample's modules, such as the rich signatures, strings, yara rules matching the module,...

The analysis environment performs an heuristic search trying to find sample's injected or unpacked modules in memory, dumping and analyzing them.

• Module 1 (probably unpacked / injected by the sample)

• Module 1 rich signatures

• 44616e530000000000000000000000000000000002000000f1c6cd001c000000f1c6cf004d000000f1c6ce00ba000000c2ecce00070000000097883000f0000

• PWS:Win32/Chedap.A is a password stealer that targets SSH user accounts.
• Win32/Zafi is a family of mass-mailing worms. The worm sends itself to e-mail addresses that it finds on the infected computer.
• This threat is classified as a trojan that steals data. A data theft trojan gathers personal data, often of a financial nature, from affected systems.
• Virus:Win32/Quervar is a virus that infects specific Microsoft Office document files and executable files.
• Win32/Malword is a detection used to identify maliciously formed Word documents that contain code that attempts to exploit a vulnerability in Wordpad.
• This threat is classified as a password-stealing troian. This trojan installs a keystroke logger which records keystrokes and sends it to remote attackers.
• This is a trojan that is contained within websites that are malicious. It may redirect your browser to a website other than the one you expect.
• Win32/Ramnit is a trojan that allows limited remote access and control to an affected computer.
• BrowserModifier:Win32/Zwangi is a program that runs as a service in the background and modifies Internet browser search functionality.
• Win32/Sinowal is a family of password-stealing and backdoor programs. It may capture banking credentials and send the data to the attacker.
• Win32/Tracur is a malware that redirects Internet search queries to a malicious URL and allows backdoor access and control.
• Win32/Nitol.A is a malware that performs DDOS (Distributed Denial of Service) attacks against a target system, which is usually a website.
• Win32/Pramro.F is a trojan that creates a proxy on an infected computer. Proxy servers may be used by attackers to hide the origin of malicious activity.
• JS/Seedabutor.B is a JavaScript trojan that attempts to redirect your browser to another website.
• Win32/Sality.AT is a detection for a virus that spreads by infecting Windows executable files and by copying itself to removable and remote drives.
• JS/Medfos.B is a malicious JavaScript file that redirects search queries when using websites such as AOL, Ask, Bing, Google and Yahoo.
• Win32/Kelihos is a trojan family that distributes spam email messages. The spam messages could contain hyperlinks to installers of Win32/Kelihos malware.
• Win32/Cameobe.X
• Win32/Zafi
• Win32/Quervar.X
• Win32/Mabezat.A
