Threads tree

The following tree represents sample's threads. T<index> is an alias for sample's threads (numeration is done in the order of threads creation). P<index> is an alias for processes owning sample's threads.

Running processes

Here it is the list of running processes after sample execution.

Processes with sample' threads

Connections and readable network traffic

The analysis environment captures network traffic happened while sample execution. It classifies the traffic and tries to extract the most significant parts from the communications data.

In this section it's possible to find parts of the communication data that are easier to be read.

Malware processes' network events

The analysis environment tries to capture and collect network actions performed by sample's threads.

Sample's unpacked / injected modules

In this section it's possible to find information about sample's modules, such as the rich signatures, strings, yara rules matching the module,...

The analysis environment performs an heuristic search trying to find sample's injected or unpacked modules in memory, dumping and analyzing them.

• Module 1 (probably unpacked / injected by the sample)

• Module 1 rich signatures

• Module 1 yara matches

• Module 1 strings

• Module 1 most interesting strings

• - In case of no updates from the software,
• - Proceed with the full recovery of your system (see next page)
• - Use our free file recovery tool for our guarentee we can repair your files
• - Check your computer and analyse which files were affected
• Time is previous; do not waste it. The longer you take, the more our demands increase. We will destroy the file recovery software after given time.
• Our recovery software is a paid product, and also the only software which can recover your files. If we don't receive payment we will destroy it, and your files will become useless as no one will ever be able to restore them.
• We've encrypted your files with AES-256 and RSA-1024 ciphers using a secure encryption key. You can personally check every file on your computer and verify this.
• It is advisable that you do not use your computer while your files are decrypting as they can become permenantly damaged if the software crashes.
• Your files are being decrypted. Ensure your computer is connected to power supply to avoid interruption of the decryption process.
