Analysis report for sample: 06cae5db8b80c183d489de18a44ad29b

This report has been generated by a set of tools for semi-supervised behavioral analysis of executables.

More information about these reports at **http://www.vallejo.cc**.

This work is licensed under a Creative Commons Attribution 4.0 International License. To view a copy of this license visit http://creativecommons.org/licenses/by/4.0/.

Report classification: 48723 (indicates the level of interest of the report, based on the amount of information collected about the sample).

Sample

- md5: 06cae5db8b80c183d489de18a44ad29b

AV detections

- Microsoft: Trojan:Win32/Dynamer!rfn
- Kaspersky: Trojan-Ransom.Win32.Shade.nhb
- Symantec: Packed.Generic.459
- Malwarebytes: Ransom.Cerber

Original source url

-

Virustotal url

- https://virustotal.com/es/file/bf9a0997b2b3e457628adede2a757e432de347fc097df81401e42ab907be5c27/analysis

Yara matches

The following yara rules have matched injected or unpacked modules's code or data areas.

- suspicious_packer_section (The packer/protector section names/keywords)
- UPX ()
- IsPE32 ()
- IsWindowsGUI ()
- IsBeyondImageSize (Data Beyond ImageSize Check)
- HasRichSignature (Rich Signature Check)
- without_attachments (Rule to detect the no presence of any attachment)
- without_images (Rule to detect the no presence of any image)
- without_urls (Rule to detect the no presence of any url)
- contentis_base64 (This rule finds for base64 strings)
- RIPEMD160_Constants (Look for RIPEMD-160 constants)
- SHA1_Constants (Look for SHA1 constants)
- IsPacked (Entropy Check)

Threads tree

The following tree represents sample's threads. T<index> is an alias for sample's threads (numeration is done in the order of threads creation). P<index> is an alias for processes owning sample's threads.

Running processes

Here it is the list of running processes after sample execution.

Processes with sample' threads

- Name services.exe Alias P16
- Name svchost.exe Alias P10
- Name svchost.exe Alias P4
- Name dwm.exe Alias P17
- Name cebo.exe Alias P0
- Name vssadmin.exe Alias P2
- Name svchost.exe Alias P1
- Name WerFault.exe Alias P3
- Name WerFault.exe Alias P5
- Name conhost.exe Alias P6
- Name conhost.exe Alias P7
- Name conhost.exe Alias P8
- Name explorer.exe Alias P9
- Name explorer.exe Alias P11
- Name cmd.exe Alias P18
- Name conhost.exe Alias P12
- Name taskkill.exe Alias P13
- Name mode.com Alias P19
- Name conhost.exe Alias P14
- Name WmiPrvSE.exe Alias P15

Other processes

- Name System
- Name smss.exe
- Name csrss.exe
- Name wininit.exe
- Name csrss.exe
- Name winlogon.exe
- Name lsass.exe
- Name lsm.exe
- Name svchost.exe
- Name svchost.exe
- Name svchost.exe
- Name audiodg.exe
- Name TrustedInstaller.exe
- Name svchost.exe
- Name svchost.exe
- Name spoolsv.exe
- Name svchost.exe
- Name svchost.exe
- Name vmtoolse.exe
- Name svchost.exe
- Name dllhost.exe
- Name msdtc.exe
- Name sppsvc.exe
- Name taskhost.exe

Most interesting actions

The following list it's a collection of the most interesting events captured. This list is ordered by the score assigned to the event. In the section "Threads behavioural information" it's possible to find all the actions performed by each sample's thread ordered chronologically.

- Process Create (C:\\Windows\\system32\\vssadmin.exe PID: P2, Command line: C:\\Windows\\system32\\vssadmin.exe List Shadows)
- Process Create (C:\\Windows\\system32\\mode.com PID: P19, Command line: mode con: cols=20 lines=1)

Connections and readable network traffic

The analysis environment captures network traffic happened while sample execution. It classifies the traffic and tries to extract the most significant parts from the communications data.

In this section it's possible to find parts of the communication data that are easier to be read.

The current IP address space (IPv4) consists of 4,294,967,298 addresses. Of these addresses some are reserved for private networks (about 18 million) and others for multicast (about 270 million), so in theory there can never be more than 4 billion computers and servers connected to the internet at any given moment. This is a limiting factor since there are about 7 billion people on earth. There is a new addressing schema being implemented (IPv6) that has 340,282,366,920,938,463,463,374,607,431,768,211,456 possible addresses. [...]<h2>[...]Why does my IP address change?</h2>[...]Some providers want to discourage their clients from running a server (mail, ftp, game or other) on their computer and therefore change the public IP address the user gets regularly. Other providers have fewer addresses than they have subscribers and therefore assign a random address to each user when he connects to the internet and assign that same address to another user after he disconnects. Both these processes are usually done by the Dynamic Host Configuration Protocol server (DHCP server). [...]<h2>[...]What would I need my IP address for?</h2>[...]Some people want to run a mail, ftp or game server on their computer and for that software to run it is usually necessary to enter the public IP address currently assigned to the user into the configuration. Other people would like to use a remote desktop application and want to know what IP address to connect to from a remote location. [...]<h2>[...]How does an IP address look?</h2>[...]The currently used IP addresses (IPv4) look like four blocks of digits ranging from 0 to 255 separated by a period like "192.168.0.255".In the new schema (IPv6) addresses can be written in different ways: [...]<ul>[...]<li>[...]2001:2353:0000:0000:0000:0000:1428:57ab</li>[...]<li>[...]2001:2353:0000:0000:0000::1428:57ab</li>[...]<li>[...]2001:2353:0:0:0:0:1428:57ab</li>[...]<li>[...]2001:2353:0::0:1428:57ab</li>[...]<li>[...]2001:2353::1428:57ab</li>[...]</ul>[...]<h2>Hide your IP address</h2>[...]Find out how to easily <a href="http://aff.ironsocket.com/SH7L" target="_blank">hide your IP address</a> via this <a href="http://aff.ironsocket.com/SH7L" target="_blank">link</a>[...] [...] [...] [...] [...] [...]<script type=\'text/javascript\'><!--// <![CDATA[[...]/* [id3] WhatsMyIp.net - Default */[...]OA_show(3);[...]//]]> --></script><noscript><a target=\'_blank\' href=\'http://ads.wsrs.net/www/delivery/ck.php?n=MyIPdb5f512\'><img border=\'0\' alt=\'\' src=\'http://ads.wsrs.net/www/delivery/avw.php?zoneid=3&n=MyIPdb5f512\' /></a></noscript>[...] [...] [...] [...] [...]<a href="mailto:advertise@provaz.eu">Advertise on this site?</a>[...] [...]© 2002 - 2017 <a href="/">WhatsMyIp.net</a>[...]is provided by <a href="http://wsrs.net/" title="WhatsMyIp.net is provided by wsrs.net">wsrs.net</a> | powered by <a href="http://cmsgear.com/" title="powered by cmsGear">cmsGear</a>[...] [...] [...] [...]</body>[...]</html>

Threads behavioural information

In this section it's possible to find information about sample's threads, such as the actions performed by each sample's thread ordered chronologically.

• Thread T0 (in process P0, cebo.exe) description

• Thread's childs

• Thread T1 (in process P0, cebo.exe)

• Thread' events

• Thread Create (Thread ID: T1)

• Thread T1 (in process P0, cebo.exe) description

• Thread's childs

Malware processes' network events

The analysis environment tries to capture and collect network actions performed by sample's threads.

Process P0 (cebo.exe)'s network events

Sample's unpacked / injected modules

In this section it's possible to find information about sample's modules, such as the rich signatures, strings, yara rules matching the module,...

The analysis environment performs an heuristic search trying to find sample's injected or unpacked modules in memory, dumping and analyzing them.

• Module 1 (probably unpacked / injected by the sample)

• Module 1 rich signatures

• 44616e5300000000000000000000000000bd4f96000b0000001e5295003f0000001e528300cf0000001e5284004800000027c66d000400000027c67b000f000
00000000100df0000001e528a001a0200001e529400010000001e529100

• Module 1 yara matches

• Module 1 strings

• Module 1 most interesting strings

• url | valid domains | tlds: u.jP
• url | valid domains | tlds: $t@Ht7Ht.Ht%Ht

• Module 1 other strings
