Threads tree

The following tree represents sample's threads. T<index> is an alias for sample's threads (numeration is done in the order of threads creation). P<index> is an alias for processes owning sample's threads.

Running processes

Here it is the list of running processes after sample execution.

Processes with sample' threads

- Name cebo.exe Alias P0
- Name cebo.exe Alias P1
- Name vyfsnacroic.exe Alias P2

Connections and readable network traffic

The analysis environment captures network traffic happened while sample execution. It classifies the traffic and tries to extract the most significant parts from the communications data.

In this section it's possible to find parts of the communication data that are easier to be read.

Malware processes' network events

The analysis environment tries to capture and collect network actions performed by sample's threads.

Sample's unpacked / injected modules

In this section it's possible to find information about sample's modules, such as the rich signatures, strings, yara rules matching the module,...

The analysis environment performs an heuristic search trying to find sample's injected or unpacked modules in memory, dumping and analyzing them.

• Module 1 (probably unpacked / injected by the sample)

• Module 1 rich signatures

• If You have really valuable data, you better not waste your time, because there is no other way to get your files, except make a payment.
• So, there are two ways you can choose: wait for a miracle and get your price doubled, or start obtaining BTC NOW, and restore your data easy way.
• What do I do ?
• Decrypting of your files is only possible with the help of the private key and decrypt program, which is on our secret server.
• !!! ALL YOUR FILES were encrypted with the public key, which has been transferred to your computer via the Internet.
• !!! Specially for your PC was generated personal RSA-4096 KEY, both public and private.
• How did this happen ?
• All of your files were protected by a strong encryption with RSA-4096.
• What happened to your files ?

• If You have really valuable data, you better not waste your time, because there is no other way to get your files, except make a payment.
• So, there are two ways you can choose: wait for a miracle and get your price doubled, or start obtaining BTC NOW, and restore your data easy way.
• What do I do ?
• Decrypting of your files is only possible with the help of the private key and decrypt program, which is on our secret server.
• !!! ALL YOUR FILES were encrypted with the public key, which has been transferred to your computer via the Internet.
• !!! Specially for your PC was generated personal RSA-4096 KEY, both public and private.
• How did this happen ?
• All of your files were protected by a strong encryption with RSA-4096.
• What happened to your files ?

• If You have really valuable data, you better not waste your time, because there is no other way to get your files, except make a payment.

• So, there are two ways you can choose: wait for a miracle and get your price doubled, or start obtaining BTC NOW, and restore your data easy way.

• What do I do ?

• Decrypting of your files is only possible with the help of the private key and decrypt program, which is on our secret server.

• !!! ALL YOUR FILES were encrypted with the public key, which has been transferred to your computer via the Internet.

• !!! Specially for your PC was generated personal RSA-4096 KEY, both public and private.

• How did this happen ?

• All of your files were protected by a strong encryption with RSA-4096.

• What happened to your files ?
