Threads tree

The following tree represents sample's threads. T<index> is an alias for sample's threads (numeration is done in the order of threads creation). P<index> is an alias for processes owning sample's threads.

Running processes

Here it is the list of running processes after sample execution.

Processes with sample' threads

- Name cebo.exe Alias P0
- Name mfwzscmdtwo.exe Alias P1

Connections and readable network traffic

The analysis environment captures network traffic happened while sample execution. It classifies the traffic and tries to extract the most significant parts from the communications data.

In this section it's possible to find parts of the communication data that are easier to be read.

Sample's unpacked / injected modules

In this section it's possible to find information about sample's modules, such as the rich signatures, strings, yara rules matching the module,...

The analysis environment performs an heuristic search trying to find sample's injected or unpacked modules in memory, dumping and analyzing them.

• Module 1 (probably unpacked / injected by the sample)

• Module 1 rich signatures

• The value of ESP was not properly saved across a function call. This is usually a result of calling a function declared with one calling convention with a function pointer declared with a different calling convention.
• Changing the code in this way will not affect the quality of the resulting optimized code.
• A cast to a smaller data type has caused a loss of data. If this was intentional, you should mask the source of the cast with the appropriate bitmask. For example:
• Stack memory was corrupted
• A local variable was used before it was initialized
• Stack memory around _alloca was corrupted
• Unknown Runtime Check Error
• Stack pointer corruption
• Cast to smaller type causing loss of data
• Stack memory corruption
• Local variable used before initialization
• Stack around _alloca corrupted
• Program:
• Runtime Error!
• <program name unknown>
• Microsoft Visual C++ Runtime Library
• - floating point support not loaded
• R6002
• - not enough space for arguments
• R6008
• - not enough space for environment
• R6009
• Please contact the application's support team for more information.
• This application has requested the Runtime to terminate it in an unusual way.
• - not enough space for thread data
• R6016
• - unexpected multithread lock error
• R6017
• - unexpected heap error
• R6018
• - unable to open console device
• R6019
• - not enough space for _onexit/atexit table
• R6024

• - not enough space for stdio initialization
• R6026
• - not enough space for lowio initialization
• R6027
• - unable to initialize heap
• R6028
• - CRT not initialized
• R6030
• This indicates a bug in your application.
• - Attempt to initialize the CRT more than once.
• R6031
• - not enough space for locale information
• R6032
• This indicates a bug in your application. It is most likely the result of calling an MSIL-compiled (/clr) function from a native constructor or from DllMain.
• - Attempt to use MSIL code from this assembly during native code initialization
• R6033
• Please contact the application's support team for more information.
• An application has made an attempt to load the C runtime library incorrectly.
• R6034
