Analysis report for sample: 0059a862f86f2377289749265286c7a0

This report has been generated by a set of tools for semi-supervised behavioral analysis of executables.

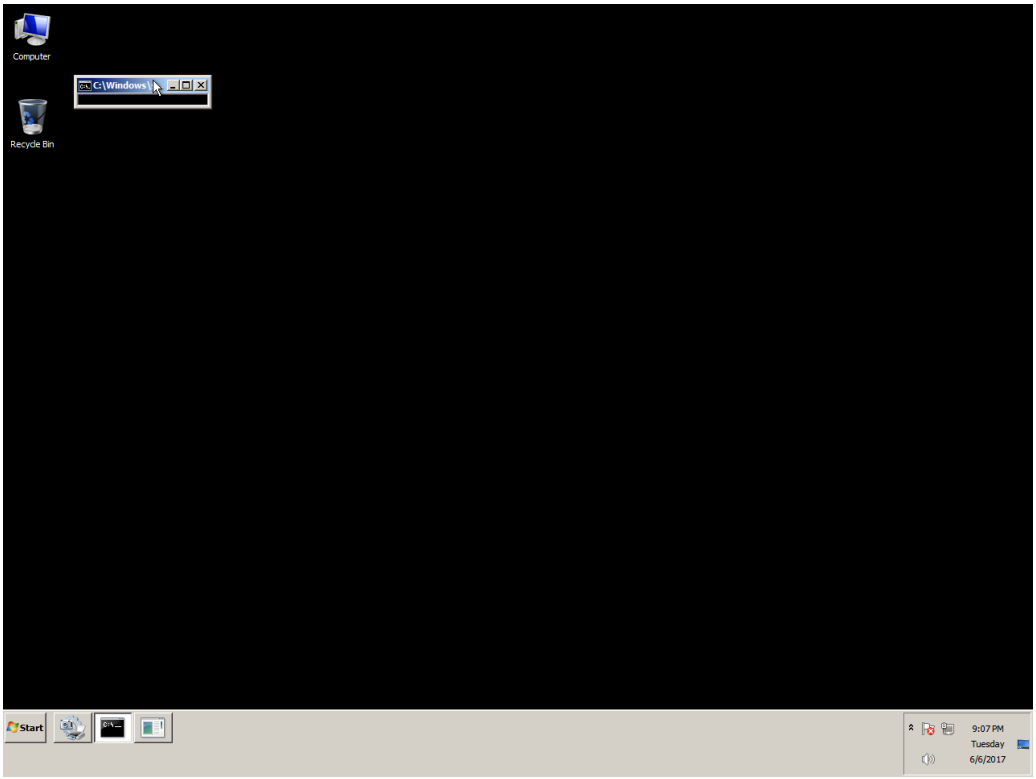
Yara matches

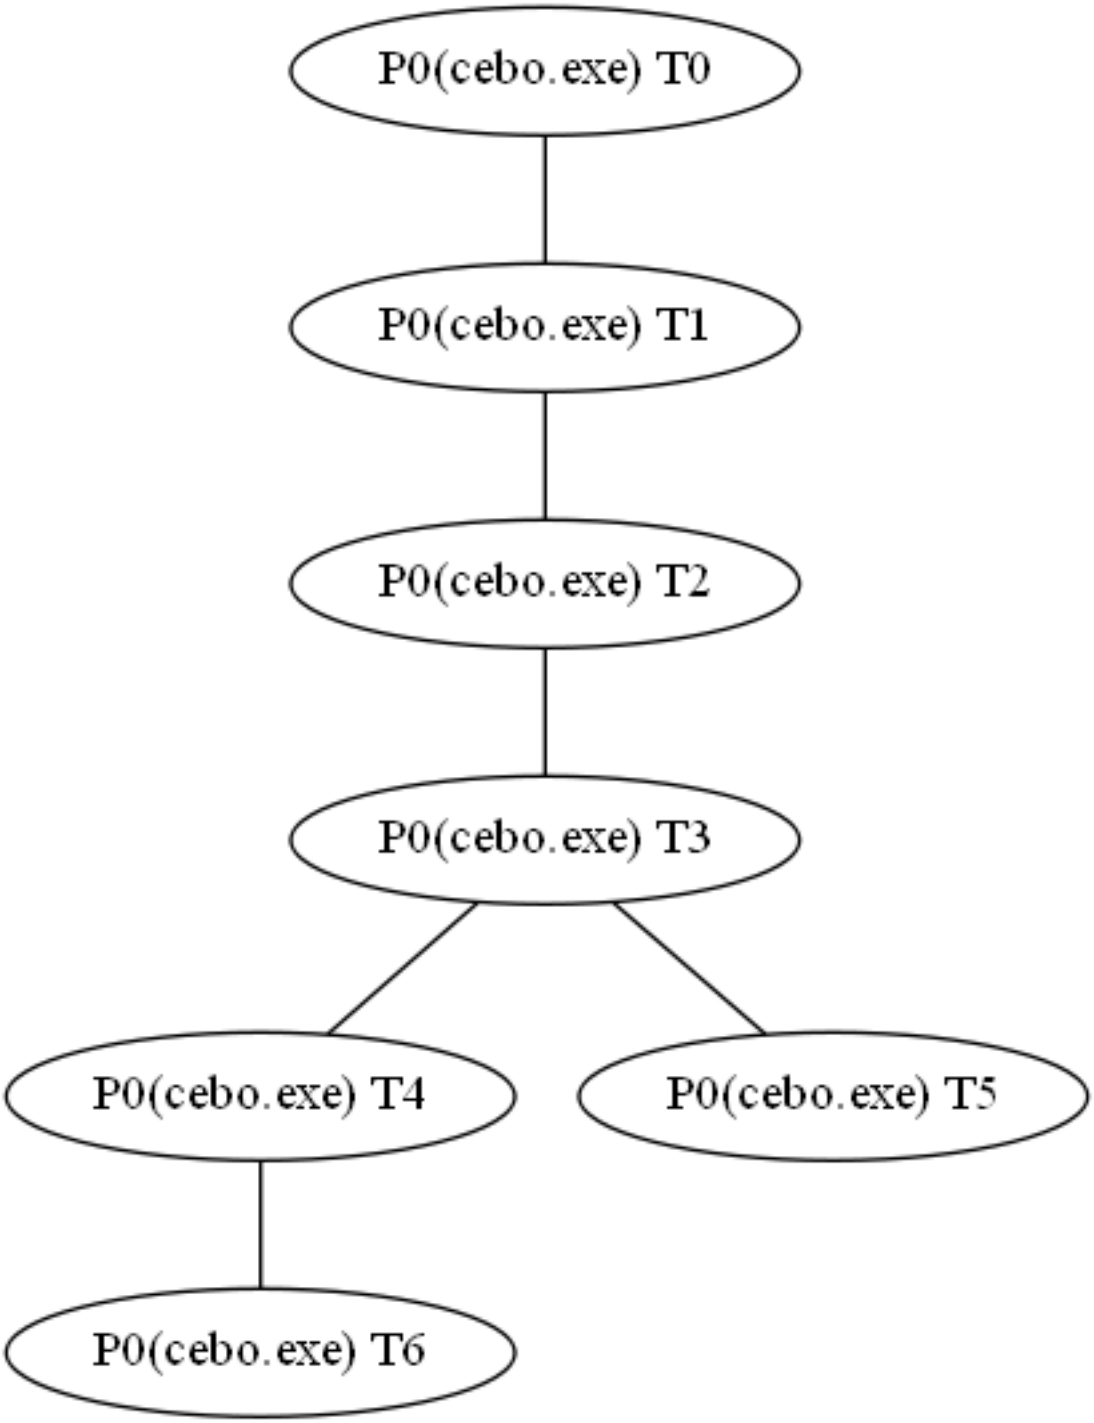
The following yara rules have matched injected or unpacked modules's code or data areas.

Snapshot



Threads tree

The following tree represents sample's threads. T<index> is an alias for sample's threads (numeration is done in the order of threads creation). P<index> is an alias for processes owning sample's threads.



Running processes

Here it is the list of running processes after sample execution.

Most interesting actions

The following list it's a collection of the most interesting events captured. This list is ordered by the score assigned to the event. In the section "Threads behavioural information" it's possible to find all the actions performed by each sample's thread ordered chronologically.

Connections and readable network traffic

The analysis environment captures network traffic happened while sample execution. It classifies the traffic and tries to extract the most significant parts from the communications data.

In this section it's possible to find parts of the communication data that are easier to be read.

Malware processes' network events

The analysis environment tries to capture and collect network actions performed by sample's threads.

Process P0 (cebo.exe)'s network events

- TCP Reconnect (javi-PC:dynport-> javi-PC:http (0))
- TCP Reconnect (javi-PC:dynport-> javi-PC:http (0))

Sample's unpacked / injected modules

In this section it's possible to find information about sample's modules, such as the rich signatures, strings, yara rules matching the module,...

The analysis environment performs an heuristic search trying to find sample's injected or unpacked modules in memory, dumping and analyzing them.

• Module 1 (probably unpacked / injected by the sample)

• Module 1 rich signatures
