## Malware processes' network events

The analysis environment tries to capture and collect network actions performed by sample's threads.

## Sample's unpacked / injected modules

In this section it's possible to find information about sample's modules, such as the rich signatures, strings, yara rules matching the module,...

The analysis environment performs an heuristic search trying to find sample's injected or unpacked modules in memory, dumping and analyzing them.

### • Module 1 (probably unpacked / injected by the sample)
