Connections and readable network traffic

The analysis environment captures network traffic happened while sample execution. It classifies the traffic and tries to extract the most significant parts from the communications data.

In this section it's possible to find parts of the communication data that are easier to be read.

Malware processes' network events

The analysis environment tries to capture and collect network actions performed by sample's threads.

Process P3 (wuapp.exe)'s network events

- TCP Connect (javi-PC.localdomain:dynport-> ip217.ip-178-32-196.eu:8005 (0))
- TCP Send (javi-PC.localdomain:dynport-> ip217.ip-178-32-196.eu:8005 (208))
- TCP Receive (javi-PC.localdomain:dynport-> ip217.ip-178-32-196.eu:8005 (303))

Sample's unpacked / injected modules

In this section it's possible to find information about sample's modules, such as the rich signatures, strings, yara rules matching the module,...

The analysis environment performs an heuristic search trying to find sample's injected or unpacked modules in memory, dumping and analyzing them.

• Module 1 (probably unpacked / injected by the sample)

• Module 1 rich signatures
