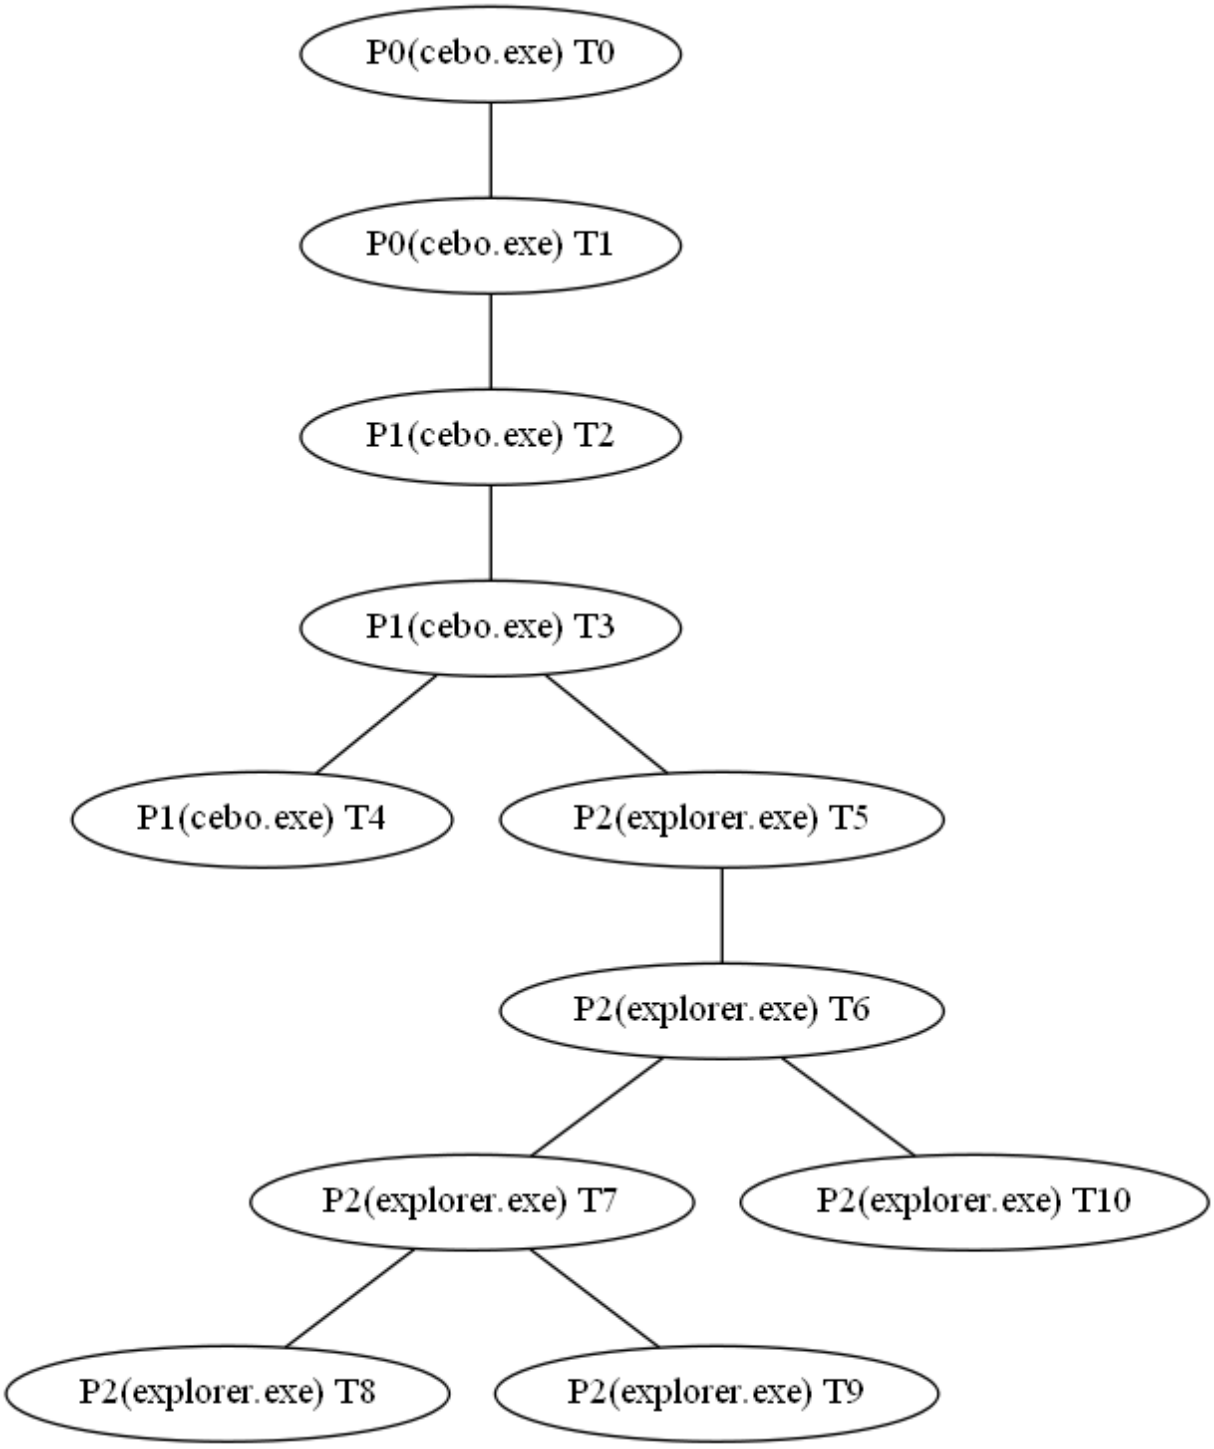
Threads tree

The following tree represents sample's threads. T<index> is an alias for sample's threads (numeration is done in the order of threads creation). P<index> is an alias for processes owning sample's threads.



Running processes

Here it is the list of running processes after sample execution.

Processes with sample' threads

- Name cebo.exe Alias P0
- Name cebo.exe Alias P1
- Name explorer.exe Alias P2

Most interesting actions

The following list it's a collection of the most interesting events captured. This list is ordered by the score assigned to the event. In the section "Threads behavioural information" it's possible to find all the actions performed by each sample's thread ordered chronologically.

Connections and readable network traffic

The analysis environment captures network traffic happened while sample execution. It classifies the traffic and tries to extract the most significant parts from the communications data.

In this section it's possible to find parts of the communication data that are easier to be read.

Sample's unpacked / injected modules

In this section it's possible to find information about sample's modules, such as the rich signatures, strings, yara rules matching the module,...

The analysis environment performs an heuristic search trying to find sample's injected or unpacked modules in memory, dumping and analyzing them.

• Module 1 (probably unpacked / injected by the sample)

• Module 1 rich signatures

• 44616e5300000000000000000000000006f769e00100000006f76aa00440000006f76ab001d0000000978930009000000000001004d0000006f76af00010000006f769a00010000006f769d00

• Module 1 yara matches

• IsPE32 ()
• IsWindowsGUI ()
• HasOverlay (Overlay Check)
• HasRichSignature (Rich Signature Check)
• anti_dbg (Checks if being debugged)
• win_files_operation (Affect private profile)
• without_attachments (Rule to detect the no presence of any attachment)
• without_images (Rule to detect the no presence of any image)
• without_urls (Rule to detect the no presence of any url)
• contentis_base64 (This rule finds for base64 strings)
• TEAN (Look for TEA Encryption)
